## IN THE CLAIMS

### Cancel Claim 140.

2. (Amended 5x) An apparatus for removing an overflow condition comprising:  
means for detecting a first digitally encoded data stream portion causing said overflow condition;  
means for delaying said first data stream portion for a delay time that prevents said overflow condition; and  
means for accelerating a second data stream portion that follows said first data stream portion to substantially make-up for said delay time.
